

PKCERT AI & Software Development Internship

Task 01 — Development Environment Setup & GitHub Fundamentals

Objective: Configure a complete development environment and understand the basics of GitHub and version control.

Deadline: 2 Days

Deliverables:

- Screenshot showing Python installed (version 3.11 or above)
- Screenshot showing VS Code installed with required extensions
- Screenshot showing active virtual environment
- GitHub repository link
- Screenshot showing first successful push

Part A — Development Environment Setup (40 Marks)

1. Install Python (version 3.11 or above).
2. Install Visual Studio Code.
3. Install required extensions: Python, Pylance, Jupyter, GitLens.
4. Create and activate a virtual environment using virtualenv or Conda.

Part B — GitHub Repository Setup (30 Marks)

1. Create a GitHub account (if not already available).
2. Create a repository using naming format: ai-internship-yourname.
3. Clone the repository on your local machine.

Part C — Git Fundamentals (30 Marks)

1. Create a README file containing your name, batch, and domain.
2. Add project files to repository.
3. Make your first commit with a meaningful message.
4. Push your changes to GitHub.
5. Create a new branch named setup-complete and push it.

Bonus Task (+10 Marks)

Create a Python program that asks for user name and prints a welcome message.

Criteria	Marks
Environment Setup	40
GitHub Repository	20
Git Fundamentals	20
Branching	10
Submission	10
